

IL-4 provides a preclinical manufacturing direction

The final figure asks whether a type 2-like program can be primed experimentally and tested in vivo.

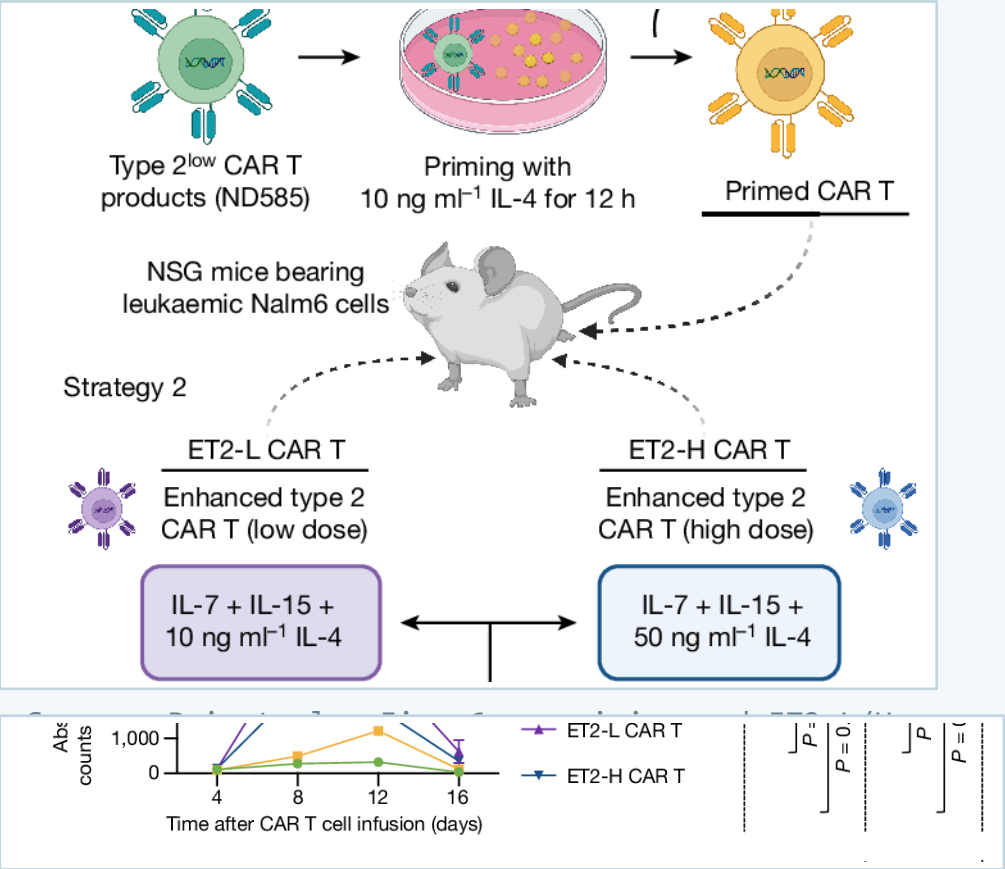

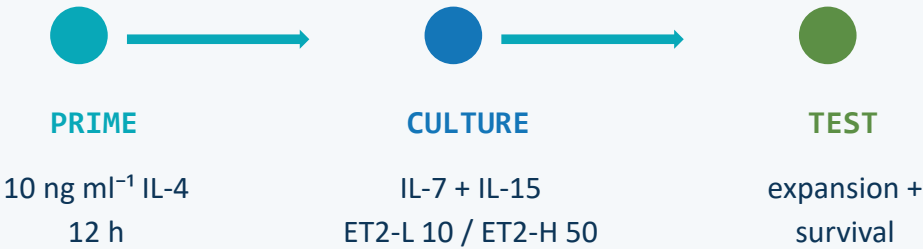

Fig. 6c-d · expansion and survival

EXPOSURE → PRODUCT → TEST

DOSE COMPARISON

Primed: 10 ng ml⁻¹ IL-4 for 12 h
ET2-L: 10 ng ml⁻¹ · ET2-H: 50 ng ml⁻¹
same culture context: IL-7 + IL-15

BOUNDARY promising lever, still preclinical
